

HO Model of a Typical Company House in Cass, West Virginia

Cass has many similar houses built by West Virginia Pulp & Paper Co. to house its workforce. When built early in the 20th Century, all were simple rectangular boxes with a first floor living room, hallway, kitchen and dining room, and three bedrooms upstairs. Over the years, many acquired various additions; this model represents the original configuration.

The kit consists of two sheets of highly detailed computer graphics, and thorough instructions. The construction takes care, but it is not difficult to turn out an impressive high-quality model. The builder needs to obtain foam board or other suitable material, glue the cardstock graphics to it, then trim and assemble the wall components.

No materials are provided for the porch steps. Likewise, the builder will need to supply basic materials for the roofs and wood or plastic shapes for the porch columns and railing, and the chimney.
